

Controller LC100E

Controller is designed to control the dispensers of Turbo Dot series. The device is mounted in electric box of the machine (robot), connected to the machine computer via RS485 interface and can be stitch together with other LC100 series controllers in one network.

Peripheral devices such as heating zones are integrated and displayed digitally on the machine monitor using current and nominal values.

To control controllers of LC100E series, LC100.exe program is used for Win 7 and Win 10 platform. The device is a high-performance addition to the Turbo-Dot system as the controller is perfect for the use of almost every dosage application.

Features

- Adjustable dosage parameters – up to 10 programs
- Repetitively accurate dosage process in long processes up to 280Hz
- Determination and display of nominal and actual values.

Compatible devices: [LC100EP](#); [LC100D](#)
